Quarterly Project Progress Report

UPPER SALMON RIVER CHINOOK SALMON REARING PONDS

Pahsimeroi Rearing Pond (Summer Chinook)

During October, the balance of approximately 763,810 summer chinook eggs were eyed at the Idaho Power Company facility on the Pahsimeroi River. These eggs were transferred to the Mackay Fish Hatchery for hatching and partial rearing.

At the end of the quarter, 737,000 fry were on hand at Mackay Hatchery. Very little hatching mortality had occurred. An O.M.P. feed diet was fed daily.

Decker Rearing Pond (Spring Chinook)

Inactive due to eye fluke.
